Direct Measurement of Blood pH, pCO₂ and pO₂

The E.I.L. Blood pH Trolley enables measurements of the pH, pCO₂ or pO₂ of small blood samples to be read on one meter by operating a single selector switch. The trolley holds all the equipment needed for the three electrode systems, yet is compact and simple in design. It incorporates the Replaceable Capillary pH Electrode System (SHH33) the Severinghaus pCO₂ System, an unstirred pO₂ System and suitable gas equilibrators. The readings are indicated on the E.I.L. Model 48B Direct Reading Blood pH Meter.
