Plastic Surgical Products

no more cut hands!

A very wide range of straight and tapered connectors, adaptors, Y-pieces and T-pieces are now available in polypropylene. These low-cost Portex products are smooth-finished internally, and externally, and have no abrupt change in section. They are suitable for sterilisation by boiling or autoclaving, and are resistant to staining or discoloration. Portex connectors and adaptors are ideal for general ward, theatre and laboratory applications. A wide range of bore sizes is available for all purposes. The examples illustrated are some of the types and sizes manufactured in surgical-grade polypropylene.

For full details of the wide range of disposable and re-usable plastic surgical products please ask the Portex representative to call, or write for a comprehensive catalogue.
