PERISTALTIC PUMPS

(OCCLUSIVE ROLLER)

- METERING
- TRANSFER
- DOSING

A well-established range covering all surgical and dispensary requirements

Watson-Marlow H.R. Flow-Inducers have a proved negligible haemolysis rate and are used in kidney, heart-lung and similar machines and for simple dispensary and surgical transfer. Flow-rates are controllable to less than 0.5%.

Available to the medical profession at sensible industrial prices—often a third the cost of specially built units—and quick delivery, they are the product of years of intensive development, arising from both industrial and medical experience.
