ACETATE, substitution of bicarbonate for, 153
acidity and peptic ulcer, 388
acute renal failure (see renal failure, acute)
adenosine 3'5 monophosphate, nephrogenous as index of parathyroid function in chronic renal disease, 451
adrenal insufficiency, experimental, effect of aldosterone and dexamethasone on diluting capacity of thick ascending limbs in, 574
age
at time of transplantation, first cadaver graft survival and, 1976, 32
children at start of treatment, 1976, 76
first cadaver transplant, 1976, 12
mean, patients on hospital haemodialysis, 1976, 11
agenesis of abdominal muscles, syndrome of, as primary renal disease in children, 1976, 86
albumin
added to dialysate, effects, 610
excretion, effect of amino acids on, 543
aldosterone, effect on diluting capacity of thick ascending limbs in experimental adrenal insufficiency, 574
alkaline phosphatase and calcium balance in renal osteodystrophy in the response to 1α hydroxy vitamin D, 425
allergy, auto-allergic diseases, plasma exchange in, 409
allogeneic tissue, induction of specific unresponsiveness to, 239
Alport's syndrome
as primary renal disease, 1976, 21
in children, 1976, 86
aluminium containing phosphate binders and dialysis dementia, 52
amenorrhoea, pathological differentiation from precocious menopause, 567
amino acid loss in haemofiltration, 136
amino acids
influence on protein metabolism and dialysis anaemia, 557
intravenously or orally, effect on haemodialysis patients, 577
and tubular reabsorption, 545
cAMP, nephrogenous, as index of parathyroid function in chronic renal disease, 451
amyloidosis, as primary renal disease, 1976, 21
anaemia
dialysis, 175–206 (see also dialysis anaemia)
in renal failure and ribonuclease activity, 533
analgesic nephropathy as primary renal disease, 1976, 18, 19, 20
anamnestic response to immunisation by, 217
angiitis and cryoglobulinaemia, 486
antibiotics, binding by dialysis membranes, 607
antibodies
in E Coli urinary tract infection, 535
serum, before and after immunisation in haemodialysed children, 209
antibody dependent cell-mediated cytotoxicity, monitoring of, 313, 315
antigen-specific receptors, 260
antihistamines, effect in acute serum sickness of rabbits, 581
antilymphocyte globulin and intensive plasma exchange for rejection, 329
arginine, tubular protein reabsorption, 543
artery stenosis, kidney transplant, 377
aetiology, 382
artificial kidneys (see dialysers)
ascorbic acid added to dialysate, and anaemia, 192
Ask-Upmark kidney as primary renal disease in children, 1976, 86
aspirin as precipitating factor in GI tract bleeding, 388
auto-allergic diseases, plasma exchange in, 409
auto-anti-idiotypic immunity, 243, 259
automatic control of ultrafiltration, 621
B LYMPHOCYTE levels in immunological monitoring, 336
B lymphocytes, 240
Balkan nephropathy as primary renal disease, 1976, 21
baroreceptor function, adaptation of, 129
bicarbonate
  in dialysate, improved tolerance to rapid ultrafiltration with, 153
  rise, ultrafiltration vs dialysis, 164
biopsy, renal aspiration with modified fine needle, 463
births to women on dialysis and after transplantation, 1976, 45
bleeding defects
  and peptic ulceration after transplantation, 398
  effect of haemodialysis and transplantation on, 401–5
bleeding, gastrointestinal, in transplant patients, 386
blood (see also plasma, serum)
access (see vascular access)
  pressure
    kidney transplant artery stenosis, 377
      (see also hypertension)
transfusion
  and long term haemodialysis, relation to graft survival, 285
  pre-transplant, 248
  pre-transplant and graft survival, 290
whole
  assessment for antibody-dependent cell-mediated cytotoxicity in kidney patients, 321
body
  growth, children, 1976, 93
  weight
    and duration of dialysis, 1976, 48
    loss and blood pressure drop, 129
bone
  age, growth velocity in relation to, children, 104
  disease
    (see also calcium, renal osteodystrophy)
    and water preparation for dialysis, 50
marrow
  derived cells (see B cells)
  red cell colonies and ribonuclease, 533
BUN (see urea)
cardiac
  failure/arrest as cause of death, 1976, 26, 27
  toxicity and mimoxidil, 501
  cell-mediated lympholysis (see lympholysis)
cellular immunity in haemodialysis, 209
cerebro-vascular accident
  as cause of death of dialysis patients, 1976, 25, 26, 27
  as cause of death in transplanted patients, 1976, 29
children
  dialysis and transplantation, 1976, 72–
    (Contents, 71)
  growth, 1976, 93
  haemodialysed, serum antibodies before and after immunisation in, 209
  treatment facilities, 1976, 76
children’s ward, provision for patients, 1976, 76
chloramines in dialysis anaemia, 192
chronic renal failure (see renal failure, chronic)
cimetidine
  and peptic ulcer in dialysis patients, 386, 390
  and peptic ulcer in kidney transplant patients, 398
Cimino fistula, 633
citrate solution, hypertonic, as flushing solution in kidney preservation, 302, 306
clinical status (see rehabilitation status)
clot-promoting factor VIII, production, human kidney and, 401
complement dependent lymphocytotoxic antibodies, monitoring of, 313, 315
microcytotoxicity and rejection, 328
complement to monitor minimum steroid requirements, 342
computer
  program for Registry statistics, 67
  use in management of dialysis and transplant patients, 586
congenital disorders
  as primary renal disease, 1976, 19, 20
  as primary renal disease in children, 1976, 83
  renal disease and recovery of function, 55
cortical necrosis
  and recovery of function, 54
  as primary renal disease, 1976, 19, 20
  in children, 1976, 84
corticosteroids (see steroids)
cortisone, plasma concentration and haemofiltration, 145
creatinine
clearance and cryoglobulinaemia, 493
levels
effect of reduction in prednisone dose
in rejection, 345
in haemofiltration, 136
and ribonuclease activity, 528
ultrafiltration vs dialysis, 164
cryoglobulinaemia, selective removal of
plasma cryoglobulins in, 486
cryoprecipitate treatment for haemophiliacs,
403
Cuprophan membranes
(see also dialysers)
1976, 47
compared with polycarbonate membrane,
618
Cyclosporine, tubular protein reabsorption,
543
cyclophosphamide and cryoglobulinaemia,
488
cystic
renal disease and recovery of kidney
function, 55
kidney disease as primary renal disease,
1976, 18, 19, 20
kidney disease in children, 1976, 86
cystinosis
as primary renal disease, 1976, 21
in children, 1976, 86
cytotoxic antibody measured by complement-
dependent, microcytotoxicity technique
and rejection, 328
cytotoxicity, antibody-dependent cell-
mediated, whole blood for, 321
DATA collection
EDTA and UK Transplant, 296
for dialysis and transplant patients,
computer use, 586
death
donor, cause of, and graft survival, 296
during and after transplant operations,
355
in dialysis patients, causes, 1976, 25
transplanted patients, causes, 1976, 28
deionisation, 1976, 49
dementia
dialysis, 1976, 51
dialysis and water preparation, 50
dexamethasone, effect on diluting capacity
of thick ascending limbs in experimental
adrenal insufficiency, 574
diabetes as primary renal disease, 1976, 21
diagnostic technique, renal aspiration biopsy
with modified fine needle, 463
dialysate, albumin added to, 610
dialysate
bicarbonate in, improved tolerance to
rapid ultrafiltration with, 153
calcium levels in, 229
chloramines in, dialysis anaemia and, 192
delivery, 1976, 50
water preparation, 1976, 49
dialysers
Cuprophan hollow fibre, 601
disposable, automated reuse of, efficiency
of, 598
high efficiency, comparison, 601
Hollow Fibre, 1976, 47
large surface area, bicarbonate substituted
for acetate in, 153
miniature multilayer, 601
reuse of, 1976, 50
types used, 1976, 47
dialysis (see also haemodialysis)
anæmia, 175–206
amino acids and keto acids, influence
of, 357
chloramines and, 192
cytoxicity of, 177
dysproteinemia, oxygen dissociation
curve in patients on regular haemodialysis,
200
iron therapy for haemodialysis
patients, 184
body weight and duration of, 1976, 48
bone disease (see bone disease)
centres by country, 16
children, 1976, 72, 89
compared with transplantation, 1976, 11
comparison of different molecular
prescriptions, 167
dementia, 1976, 51
transplantation of patients with, 52
and water preparation, 50
duration, 1976, 46–
evolution of centres for, 1976, 4
facilities in different countries, 1976, 5
fluid (see dialysate)
frequency, 1976, 46
graft survival in relation to time on, 1976, 33
haemodiafiltration, 127–150
haemofiltration as adjunct to, 605
haemo- (see haemodialysis)
home
transfer of patients to hospital
dialysis, 11
and transplantation, integration of,
590
membranes, antibiotics, binding of, by, 607
dialysis
membrane, polycarbonate, evaluation, 618
number of patients on, 1976, 4
peritoneal, 1976, 10
pregnancy on, 1976, 45
rehabilitation on, 1976, 62
strategies, 1976, 45
survival rates, children, 1976, 79
techniques
1976, 49
alloplastic vascular prosthesis for construction of subcutaneous A-V fistulae, 635
automatic control of ultrafiltration, 621
blood access, long term, 633
single needle continuous flow, without control module, 596
ultrafiltration regulation, 624
water preparation, 1976, 49
time of rehabilitation of children according to, 1976, 92
time on, in relation to graft survival, 1976, 34
timing, 1976, 45
and transplantation, integration of, 593
ulcers in patients on regular, 386
and ultrafiltration, separation, 160
diet of uraemic patients and supplements of amino and keto acids, 558
diet therapy, neuromuscular changes in uraemic patients treated with, 568
dietician, provision for child patients, 1976, 76
2,3'-diphosphoglycerate in red cells during dialysis, 200
disodium cromoglycate, effect in acute serum sickness of rabbits, 581
diuresis without renal renin depletion in HgCl₂-induced acute renal failure, 630
diuretics and minoxidil, 501
donor death, cause, and graft survival, 296
donors
1976, 8, 30
children, 1976, 88
drug induced nephropathy as primary renal disease, 1976, 18, 19, 20
renal failure and recovery of function, 54
duodenal ulcer after transplantation, 394

E COLI urinary tract infection, antibodies in, 535
EACA tubular protein reabsorption, 543
EDTA Registry and data collection, 297
embolus, pulmonary as cause of death, 1976, 26, 27, 29

enhancement, immunological of grafts, 259
strategy for renal transplantation, 251
erythropoietin deficiency, role in pathogenesis of dialysis anaemia, 177
escherichia coli urinary tract infection, antibodies in, 535
Europe, centres for dialysis and transplantation, comparison of, 1976, 5

F₁, CELLS as tolerogens, 246
fat cells, precursor, ribonuclease and, 528
fibrin degradation products, urinary, to monitor minimum steroid requirements, 342
filtrate, passive backflow of, acute renal failure, 115
fistula, alloplastic vascular prosthesis for reconstruction of subcutaneous A-V, 635
fitness, physical (see rehabilitation)
fluid
overload, ultrafiltration for, 160
withdrawal and blood pressure drop, 129
flushing techniques in kidney preservation, 302
fourth graft (see graft survival, fourth graft)

GAMBRO Portable Perfusion Machine, 303
gastric acid
and peptic ulcer, 386
reduction in transplantation patients, 398
inhibitory polypeptide
plasma concentration and haemofiltration, 145
serum levels of immunoreactive, and insulin in uraemic patients, 550
secretions and serum gastrin in peptic ulceration after transplantation, 396
gastrin
levels in patients with peptic ulcer, 390
plasma concentration and haemofiltration, 145
gastritis
atrophic with previous duodenal ulcer, 393
cræsive post-transplant bleeding and, 386
gastroduodenal ulcer after transplantation, 396
glomerular diseases, plasma exchange in, 409
glomerulonephritis
as primary renal disease
1976, 18, 19, 20
in children, 1976, 83
glomerulonephritis (continued)
disodium cromoglycate and antihistamines, effect on, 581
histological diagnosis of, 1976, 22
IgA mesangial deposits, long term follow up, 472
and recovery of kidney function, 54
proportion of patients with, 1976, 18
glomerulonephropathies, effect of proteinuria on tubules in, 495
glucagon, hyperglucagonaemia and renal failure, 571
glucose metabolism in uraemia, serum levels of immunoreactive gastric inhibitory polypeptide and insulin, 550
gonadotrophins in dialysis patients, 566
Goodpasture’s syndrome
as primary renal disease, 1976, 21
plasma exchange in, 409
Gothenburg, HLA matching in transplantation in, 277
graft as primary renal disease, 1976, 21

  toxicity, 322
phenacetin, toxicity to kidney, 584
phosphate
  binders containing aluminium and
    dialysis dementia, 1976, 52
    levels on dialysis, 231
plasma (see also blood, serum)
  concentration changes by haemofiltra-
    tion, 144
    exchange
      in glomerular and related auto-
        allergic diseases, 409
        intensive and rejection, 328
        renin activity, treatment of haemofiltration
        in hypertension, 129
polycarbonate membrane for haemodialysis
  evaluation, 618
polycystic kidney
  as primary renal disease, 1976, 19, 20
    in children, 1976, 86
polypeptide hormones
  gastric inhibitory serum levels of
    immunoreactive and insulin in uraemic
    patients, 550
    plasma concentration and haemofiltration, 145
polytetrafluoroethylene graft as vascular
  access for haemodialysis, 222
polyuria, lithium induced, 518
potassium levels, ultrafiltration vs dialysis, 164
prednisone
  requirements in transplant patients,
    monitored by urinary fibrin degradation
    products and complement, 342
    withdrawal and renal osteodystrophy, 434
  prednisolone as precipitating factor for GI
    tract bleeding, 388
pregnancy in dialysed and transplanted
  women, 1976, 45
preservation of kidneys (see also graft
  survival) perfusion techniques
preservation of kidneys, flushing and pumping techniques, 302
primary renal disease, 1976, 18
procarbazine, for immunosuppression with anti-lymphocytic serum, 248
prolactins in dialysis patients, 566
propranolol in combination with minoxidil, 501
prostaglandins in pathophysiology of acute renal failure, 120
protein metabolism, influence of essential amino acids and keto acids on, and dialysis
anaemia, 557
reabsorption, renal tubular, mechanism of, 543
total ultrafiltration vs dialysis, 164
proteinuria, massive, and effects on renal tubular functions, 495
Prune Belly syndrome, as primary renal disease in children, 1976, 86
psychiatry, child, provision for child patients, 1976, 76
pulmonary embolus as cause of death, 1976, 26, 27, 29
pumping techniques in kidney preservation, 302
pyelonephritis antibody production, urinary tract infection, 535
as primary renal disease, 1976, 19, 20
in children, 1976, 83, 87
chronic, patients starting treatment, 1976, 23
and recovery of kidney function, 55

QUALITY of life (see rehabilitation

RECOVERY of function of kidneys, 54
refusal of treatment as cause of death, 1976, 28
Registry statistics, 1976, 4–67
conclusions, 66

rehabilitation
1976, 60
children, 1976, 90
status and body weight, 1976, 49
graft outcome and, at time of grafting, pairs of kidneys sharing different graft fates, 300
graft survival and, at time of transplantation, 1976, 34

rejection (see renal transplant rejection)
renal
(see also graft, kidney)

renal aspiration biopsy, clinical application with modified fine needle, 463
calcification (see nephrocalcinosis)
colic and medullary sponge kidney, 511, 513
concentrating ability and lithium treatment, 518
disease comparison of diet therapy, haemodialysis and transplantation, 568
primary, 1976, 18
primary, children, 1976, 83
failure (see also uraemia)
acute
Andreucci’s hypothesis, 122
evaluation of 433 cases, 628
HgCl₂ induced, 630
pathophysiology of, 115
chronic
adenosine 3’5’ monophosphate nephrogenous as index of parathyroid function in, 451
aetiology uncertain, as primary renal disease, 1976, 19, 20
haemofiltration, to treat severe hypertension in, 129
and IgA mesangial deposits
glomerulonephritis, 472
peptic ulcer, treatment of, in, 386

drug-induced
as primary renal disease, 18–20
and recovery of function, 54
hyperglucagonaemia and, 571
peptic ulcer in, treatment of, 386
ribonuclease activity in, evidence for toxicity, 528
haemodynamics, alteration in, 118
hypoplasia, dysplasia as primary renal disease in children, 1976, 83
insufficiency and lithium treatment, 525
osteodystrophy, 423–460 (see also bone disease)
calcium balance assessments in response to 1α-hydroxy vitamin D₃, 425
reversibility of, 433
‘types’ separated using 1,25 hydroxycholecalciferol, 442
transplant, transplantation (see also graft)
age at first cadaver transplantation, 1976, 12
termary stenosis, 377
cadaver graft survival, 1976, 32
centres, by country, 16
children, 1976, 72
renal transplant, transplantation (continued)
complications, 353–406
dialysis, compared with, 1976, 11
Europe, growth in, 1976, 8
evolution of centres, 1976, 4
facilities in different countries, 1976, 5
failed, survival after, 1976, 18
failure, children, 1976, 88
graft prognosis, 275–309
of haemophiliac, 401
HLA-matching, importance in primary cadaver, 277
and home dialysis, integration of, 590
integration of dialysis and, 593
neuromuscular changes after, 568
non-viable kidneys, graft survival and, 1976, 33
number of patients having, 1976, 4, 8
peptic ulceration in kidney transplantation, 396
pregnancy after, 1976, 45
rates in European countries, 1976, 9
rehabilitation after, 1976, 63
rejection, 311–350
(see also graft failure survival,
immunogen-, immune response)
allogeneic tissue of, 239
children, 1976, 89
complement (C3) as marker, 342
crisis, 362
immunological diagnosis of, 313
intensive plasma exchange,
complement dependent microcyto-
toxicity and, 328
monitoring and modulation of
recipient immune responsiveness
to prevent, 336
urinary fibrin degradation products
as marker of, 342
renal osteodystrophy, to correct, 433, 434
re-transplantation, graft survival after,
1976, 39
ribonuclease activity, changes after,
531
steroid requirements, monitoring of
patients, 342
surgical complications in 500 trans-
plantations, 355
survival rates, 1976, 15
children, 1976, 79
tolerance (see immunological tolerance)
tubule, tubular (see tubule, tubular)
vascular disease
as primary renal disease, 1976, 19, 20, 24

renal vascular disease (continued)
as primary renal disease in children,
1976, 84
following transplantation, 371
and recovery of function, 54
renin activity, plasma, haemofiltration in
treatment of hypertension, 129
renin-aldosterone system and kidney transplant
artery stenosis, 377, 379
renin-angiotensin system in pathophysiology
of acute renal failure, 118
renin
depletion to protect rats against HgCl2-
induced acute renal failure, 630
renal, role in intranephron regulation of
salt excretion, 119
reversed osmosis, 1976, 49
ribonuclease activity in renal failure,
evidence for toxicity, 528

SAPHENOUS loops, 633
Schick test, negative, vaccination in haemodialysed children, 209
school attendance, children on home dialysis,
1976, 89
provision for child patients, 1976, 76
schooling, full-time, children with trans-
plant and on dialysis, 1976, 90
seminographic bone changes in renal osteo-
dystrophy, 433
second graft, 39
segmental renal hypoplasia as primary renal
disease in children, 1976, 86
serologically defined (SD) antigens,
described, 239
serum (see also blood, plasma)
sickness of rabbits acute, effects of di-
sodium cromoglycate and antihistamines
on, 581
sexual function and hypothalamic-hypophy-
seal-gonadal axis in dialysis patients, 565
sibling graft, 1976, 31
side effects, ultrafiltration vs dialysis, 162
single needle continuous flow haemodialysis,
596
skeletal maturation, children, 104
small molecular fractions, biological toxicity
of, 167
smooth muscle cell proliferation following
transplantation, 371
social worker, provision for child patients,
1976, 76
sodium content, kidney transplant artery
stenosis and, 377, 380
somatomedin B, plasma concentration and
haemofiltration, 146
specific unresponsiveness to allogeneic tissue, 239
sperm counts in dialysis patients, 566
sponge kidney, medullary, 511
staffs, deaths from hepatitis, 1976, 57
steroid
requirements in transplant patients, monitored by urinary fibrin degradation products and complement, 342
treatment (prednisone) and reversibility of renal osteodystrophy, 433
steroids (see also under names)
and growth after transplantation, children, 103
in ultrafilterate, 149
infections following, rejection crisis, 362
and peptic ulceration after transplantation, 397
suicide as cause of death, 1976, 28
surgery for kidney transplant artery stenosis, 381
surgical complications in 500 transplantations, 353
survival rates
1976, 15
cadaver graft, 1976, 32
children, 1976, 79
long-term, 83
of patients with transplants or on dialysis, 1976, 4
and re-use of dialysers, 1976, 51
systemic lupus erythematosus
as primary renal disease, 1976, 21
effect of immune complexes on neutrophils in, 478
and recovery of function of kidneys, 54

T LYMPHOCYTE levels
in immunological monitoring, 336
T lymphocytes, 239, 252
elimination of selected, for transplantation, 260
suppressor, tolerance and, 245
whole blood and, 325
testosterone levels
in dialysis patients, 565
and haemofiltration, 145
tetanus toxoid, inhibitor effect of, in mice
by uraemic serum, 209
third graft, 1976, 39
thymidine incorporation, 3H and ribonuclease, 532
thymus-derived cells (see T cells)
thyroid stimulating hormone, plasma concentration and haemofiltration, 145
tissue typing (see HLA matching)
transferrin levels in dialysis patients,
influence of amino acids and keto acids, 558
transplant, transplantation (see renal transplant, transplantation)
transportation of kidneys and graft survival, 296, 299
trauma in donor death, and graft survival, 300
triglyceride levels and haemofiltration, 136
TSH (see thyroid stimulating hormone)
tuberculosis
as primary renal disease, 1976, 21
and recovery of kidney function, 55
tubular function(s)
and medullary sponge kidney, 511, 514, 515
massive proteinuria and its effects on, 495
tubular
glomerular feedback, 119
necrosis
acute and kidney preservation methods, 304
as primary renal disease, 1976, 19,20
in children, 1976, 84
in acute renal failure, 115
protein, effect on amino acids, 543
tubule
obstruction as pathogenic factor in acute renal failure, 117
proximal damage/dysfunction, 122
recovery of function of kidneys, 54

UK TRANSPLANT and data collection, 297
ulcer, peptic
treatment in renal failure, 386
ulceration in transplantation, 396
ultrafiltration, 151–173
accurate control of, 624
automatic control of, 621
different molecular prescriptions, 167
improved tolerance with use of bicarbonate in dialysate, 153
separation of dialysis, and, 160
uraemia (see also renal failure)
caused by graft failure, cause of death as, 1976, 27, 29
serum levels of immunoreactive gastric inhibitory polypeptide and insulin in, 550
treatment by haemofiltration, 144
uraemic (see also renal)
toxication, pre transplant blood transfusion and graft survival, 290
uremic patients, neuromuscular changes in, 568
urea levels
  effect of reduction in prednisone dose in rejection, 345
  in haemofiltration, 136
  ultrafiltration vs dialysis, 164
ureteric obstruction and medullary sponge kidney, 511
uric acid in haemofiltration, 136
urinary
  antibodies in E coli infection, 536
  infection and medullary sponge kidney, 511, 513, 514, 515
  tract infection, E coli, antibodies in, 535
urine concentration defects and medullary sponge kidney, 511, 514
VACCINATION in haemodialysed children, serum antibodies, 209
vaccine against hepatitis, efficacy of, 215
vagotomy and gastric acid secretion, 398
vascular
  access
    in haemodialysis, 633
      EPTFE graft as, for haemodialysis, 222
disease (see renal vascular disease)
vascular (continued)
  instability, acetate bicarbonate transfer and, 153
  prosthesis for reconstruction of subcutaneous A-V fistulae, 635
viral hepatitis (see hepatitis)
vitamin C (see ascorbic acid)
vitamin D
  metabolism in renal osteodystrophy, 433, 434
  response to, and calcium balance in renal osteodystrophy, 425
  use of, to separate types of osteodystrophy, 442
WATER (see also dialysate)
  chloramines in, and dialysis anaemia, 192
  preparation for dialysis, 1976, 49
  softening, 1976, 49
weight of dialysis patients and duration of dialysis, 1976, 48
