This stainless steel stabiliser has been found useful in fixing the peritoneal dialysis cannula securely into position. It can be sterilised by boiling.

The stabiliser is threaded over the placed cannula and the securing screw is tightened with a screwdriver. The stabiliser is strapped to the abdominal wall over a piece of gauze. Cannula angulation and the risk of accidental displacement are thus minimised.

It is manufactured by V. J. Millard, 38, Highgate Hill, London, N. 19, whence it can be obtained for 30/-d.
