THE NEW EFFICIENCY AND ECONOMY IN P.D.
It dispenses the treatment with greater patient-comfort; the fluid is warmed to blood temperature before it flows into the patient. The treatment is performed without fuss or ward disturbance. The patient can have confidence that 'fail-safe' mechanisms protect him at all times. The infection risk is reduced to the minimum by using only one sterile fluid circuit, eliminating the many connections and re-connections of the manual system.

Simplicity
The cycling of treatment is completely automatic and the fluid intake is accurately measured by weight. Inflow to the patient is by gravity. The retention period and the drainage period are under positive control.

Efficiency
The system is safeguarded with audio/visual warning if fluid is retained by the patient and maximum efficiency is guaranteed because the fluid temperature is always at blood temperature as it flows into the patient.

Temperature accuracy
Fluid volume used in each cycle is accurately measured and the fluid flows by gravity to the patient within 3% of body temperature. With the manual method a variation of ±10% is not uncommon, and does not contribute to patient-comfort.

Papers on P.D.
In recent years, there has been an increasing international interest in P.D. for the treatment of both acute and chronic renal failure. In the last full year of which figures are available (1968) the following papers were published on the subject. In English (from U.S.A., Canada, U.K. and others) total number of papers 62.

Czechoslovakia 2 Germany 16
Denmark 4 Italy 2
Finland 1 Japan 11
France 5 Russia 1
Spain 2

We will be pleased to supply any individual reference or a list of these references on request. Demonstrations can be arranged in your hospital on request.

FIBRIN TUNNEL FISTULA
for regular dialysis treatment

The product is packed in folia bags. Each bag contains 4 pieces of the same size.
Available sizes: I.D. (mm) 1, 5–2, 0–2, 5–3, 0–3, 5– all in standard length of 5 mm.
Special sizes or types can be produced according to your special orders.
For detailed literature about the Fibrin Tunnel, please write to:

ELETTRACQUA S.P.A.

I demineralizzatori della serie “MAJOR” sono a 3 colonne in acciaio AQ 42 e materiale plastico.
Le colonne sono corredate di resine selezionate, sintetiche, forti e producono, con immediezezza,
acqua demineralizzata ad alto grado di purezza
(residuo salino inferiore a 0.2 p.p.m.).
La rigenerazione può avvenire nella versione
semi-automatica o completamente automatica;
in quest’ultimo caso con prerogativa di una
linea di conduzione manuale in caso di avaria
agli automatismi.
I suddetti apparecchi sono particolarmente adattati
per essere installati in Ospedali per usi di laboratorio e per centri di emodialisi.
Per preventivi, informazioni, studio di ogni relativo problema rivolgersi a:

Ufficio Tecnico Commerciale:
Viale Monza, 170

tel. 809.793

Demineralizzatore a scambio ionico
automatismo e semiautomatico a tre
colleone “Major”, per pressioni fino
a 5 ale.
Packaged Sterility

The Quinton A-V cannula system parts are now packaged sterile, "clean" and ready for immediate use. Our new plastic peel-open package with a newly designed label provides description and part number information. The clear plastic front allows visual part inspection and identification. A tough, semi-permeable, opaque white plastic backing sheet provides easy (ETO) gas sterilization with minimal gas retention. Resterilization can be accomplished in conventional gas sterilizers without package rupture. The new package is so tough it cannot be torn by hand, and resists puncture by sharp objects. Of particular importance is the waterproof characteristic of the plastic package and its excellent shelf-life.

DIALYSIS SOLUTION GENERATOR

Dimensions: 370 x 360 x 490 mm  
Weight: 37 Kgs  
For use at home or in hospital

BLOOD PUMP

Dimensions: 245 x 280 x 200 mm  
Weight: 8 Kgs  
Flow rate: Up to 700 cc/min.  
Speed and squashing of the pipe: Adjustable

BUBBLE ALARM ON BLOOD LINE

Sound alarms and stops the blood pump when either a bubble is passing or the level in the bubble trap is falling.
N-4015B FOR COIL DIALYZER

Model N-4015 is specially designed to be used with A.V. Fistulas in unattended dialysis. It features five monitors with new compact plug-in electronic sensor units. Four of these monitors control the blood pump and a venous line clamp. Battery operated power-off alarm. Complete unit requires only 25" x 18" floor space.

For additional information and prices, contact your representative, or DWS inc., 13520 S.E. Pheasant Court, Portland, Oregon 97222, U.S.A.
THE GAMBRO SYSTEM FOR HAEMODIALYSIS
MOBILE UNIT 4-AK-968

This redesigned and approved model is equipped with a very wide range of standard equipment, covering practically all requirements of today for instance:

MIXING PUMP
for dilution of dialysis concentrate with water (1 + 34), adjustable flow up to 800 ml/min of dialysis fluid ready for use.

THERMOSTATIC CONTROL
for controlled heating of dialysis fluid.

INBUILT SAFETY THERMOMETER
that interrupts the electric circuit in the event of overheating.

FLOW METER
for dialysis fluid.

AUTOMATIC MAINTENACE
for maintenance of pre-set negative pressure in dialysis fluid.

CONDUCTIVITY MONITOR
for dialysis fluid. On deviation from pre-set value the flow of the dialysis is stopped.

FLOW PUMP
for dialysis fluid. The capacity of the pump is sufficient to produce considerable negative pressure if desired.

BLOOD PRESSURE METER
on both arterial and venous side.

AUTOMATIC INTERRUPTION
of blood flow between the patient and the dialysis fluid in event of blood leakage.

BLOOD PUMP

HEPARIN PUMP

FILTER HOLDER
for Gambro’s disposable filter allows rotational and vertical adjustment of the filter.

ab gambro
a subsidiary of Holger Crafoord AB.

Dialaflex

A completely closed system for peritoneal dialysis

- Obviates the need for an air inlet, thus minimising the risk of peritonitis
- Space saving
- Easy to handle
- Disposable

Dialaflex sterile solutions, specially formulated for peritoneal dialysis are available in collapsible containers of 1 litre.

DIALAFLEX No 61
A balanced electrolyte solution for routine peritoneal dialysis.

DIALAFLEX No 62
A balanced electrolyte solution with additional Dextrose providing marked hypertonicity for the rapid removal of oedematous fluid.

DIALAFLEX No 63
A balanced electrolyte solution with reduced Sodium content lowering the total intake of the ion in conditions where this is desirable.

Detailed information available on request
DIALAFLEX is a Trade Mark of
