After extrication

(no fluids could be given before rescue)

Initiate isotonic saline

Administer overall 3-6 L of fluid (subject to change depending on several variables)

(Monitor for 6 hours since initiation of fluids)

Anuria

IV fluid* (0.5 - 1 L/day + all presumed losses of the previous day)

(was receiving isotonic saline during rescue)

Continue isotonic saline

Urine output (+)

Close monitoring impossible

IV fluid* (3 - 6 L/day)

Close monitoring possible

IV fluid* (more than 6 L/day)
