Professor Calne (Westminster Hospital, London S.W.1, Great Britain) reviewed work on renal transplantation under the headings of the mechanisms of rejection, experimental prevention of rejection and clinical application. The experimental work has been published in the articles listed below:

**DISCUSSION**

The Chairman: Thank you. I think that was a very elegant presentation and surely it was remarkable to summarise so many things in such a short time. I think that we could now hear several papers about humoral aspects of this rejection reaction and first, Dr. Latner's one on iso-enzymes.
